

JENISH PATEL

469-922-0827 | Fairfax VA | jenishnitinpatel@gmail.com | [LinkedIn](#) | [GitHub](#)

TECHNICAL SKILLS

Languages: Python, SQL, R, Excel VBA.

Visualization: Power BI, Tableau, Looker Studio, Amazon QuickSight.

Data Engineering: ETL Pipelines, Data Modeling, Snowflake, BigQuery, AWS S3.

Libraries: Pandas, NumPy, Scikit-learn, Matplotlib.

Data Analysis: Data Cleaning, Data Validation, KPI Reporting, Process Improvement.

Tools: Git, GitHub, Jupyter Notebook, CRM, Jira, Agile, Microsoft SQL Server, Power Query.

EDUCATION

George Mason University, Fairfax, VA

May 2026

Master of Science, Computer Science (GPA: 3.4/4.0)

Relevant Coursework: Database Management Systems, AI, Data Structures and Algorithms, Project Management, ML

Silver Oak University, Ahmedabad, India

May 2024

Bachelor of Technology, Information Technology (GPA: 3.7/4.0)

WORK EXPERIENCE

Data Analyst Intern | PlayPower Labs | Gandhinagar, India (Remote)

Sep 2023 - Apr 2024

- Spearheaded an independent research initiative analyzing 80,000+ learner records using Python and SQL, identifying key engagement drivers that influenced feature prioritization across 3 K-12 EdTech product lines.
- Developed and presented operational dashboards and KPI reports supporting workforce planning, resource tracking, and business decision making.
- Constructed ETL pipelines and implemented automated data quality checks and anomaly detection across 5+ data sources, eliminating manual reporting gaps across 2 major product releases.

Software Developer | Inextrix Technologies | Ahmedabad, India

Sep 2022 - Aug 2023

- Engineered robust ETL pipelines for 5+ diverse data sources, implementing automated Data validation, quality assurance checks, and anomaly detection to eliminate manual reporting gaps and improve reporting accuracy across critical business workflows.
- Optimized 50+ complex SQL queries including joins, subqueries, and window functions, improving query execution times by 25% and reducing processing load by 18% across systems supporting 10,000+ users.
- Engineered self-service KPI reporting pipelines using SQL and Excel with Power Query, partnered with executive and operations teams to deliver accurate weekly performance dashboards, ensuring cross-functional alignment and data-driven decision making.
- Collaborated with cross-functional coordination, operational scheduling support, and data-driven process improvements.

PROJECTS

Stock Market Monitoring System

2026

- Architected a real-time backend pipeline integrating RESTful web services (JSON) to collect and process real-time data for 50+ instruments, deployed and tested in a Linux-based environment.
- Implemented automated data validation and troubleshooting workflows to identify reporting inconsistencies and improve operational accuracy.
- Conducted exploratory data analysis on 50+ instruments to identify market trends and anomalies, generating automated alerts that reduced manual monitoring time by 80%.

Insurance Claims Web Application

2026

- Architected and normalized a 5-table relational database, engineering a backend pipeline that processed 100,000+ records using Python, MySQL, and SQL query development.
- Implemented RESTful web services for critical data ingestion, user authentication, and data retrieval functionalities, ensuring application accuracy throughout the SDLC.

Job Market Intelligence Dashboard

2025

- Launched a web-based application collecting 50,000+ records via REST APIs, applying SQL query development and database management on a Linux environment.
- Designed JavaScript front-end views connected to PostgreSQL backend, managed with Git version control following standard SDLC procedures.
